

## BSBT Boring Bar Style Robuto

Tool body has a spring inside which creates the burnishing force . BSBT is different than other single roll tools because the free angle of the roller can be adjusted by the operator. This way burnishing pressure can be changed while the burnishing force is constant.

Extension shanks are available for longer workpieces

- Tools are engineered to use on machining centers.
- Dia adjustment range is wide.
- Delivered with 3 different arms:

1. Arm for workpieces between  $\varnothing 150 \sim \varnothing 190$
2. Arm for workpieces between  $\varnothing 180 \sim \varnothing 250$
3. Arm for workpieces between  $\varnothing 240 \sim \varnothing 370$

- Shanks are available with different sizes.
